Laser Hair Removal

Why do humans have hair? Protection from sun and cold, probably; and that was very important to the cave man.

Modern man now either has too much or too little hair or it's in the wrong place.

Women would like to get rid of the dark hair of the face and bikini line. Men often would like less hair on their back and chest.

Until now, our options for hair removal were shaving, waxing, chemically removing or plucking. Julius Caesar plucked all of his hair out routinely because of a fear of lice.

Well, Caesar would now be able to have his hair quickly removed by laser. He would even be able to get to those meetings in the forum the same day.

So, if your unwanted hair is dark (laser does not work well on light hair) you can be rid of it before summer.

If you would like more information on laser hair removal or other procedures, contact us at Dermatology Associates 2300 West Stone Drive, at (423) 246-4961.
